About us

25 years of experience, highly recommended and an individual approach to each and every client are just a few of our company's strengths. Our doors are produced with great care and their joinery is characterised by excellent durability and high thermal insulation, all of which is proven through testing and in practice. Our state-of-the-art machinery and our vast experience in joinery allow us to produce pragmatic solutions to match our clients visual and technical needs and expectations. Homeefe's doors are versatile as they are suitable for modern buildings as well as country and town houses. Every product that leaves our production line is certified and approved for use in construction. All elements used in the production of our products come from reputable sources, which ensures their durability.

Why choose Homeefe doors?

Our doors are made of highly durable wood: pine with a 5.5mm oak veneer or 100% oak. Using properly dried plywood prevents the structure from warping even after many years of use. Ensuring adequate preservation of our wood during the production process protects and ensures the longevity of our products. We offer a wide range of colours: the full RAL palette and a choice of stains and varnishes, meaning all our clients can be sure to find the door they want. We even offer the option of two-colour painting for your chosen door. Our products compliment any building facade. The variety of styles that we offer and the option to individually design your door makes every door purchased from us unique. Our catalogue offers over 1000 models, which you can adapt to your own preferences and the individual architectural style of the building. Additionally, you can also choose from a diverse range of door handles and furniture, available in many shapes and colours. Another option to customise your door's functionality is by adding fittings such as: strip locks, bolts, fingerprint readers or electromagnetic locks. All materials used to produce and equip our doors are sourced from reputable manufacturers with a proven track record.

- extra charge up to the width of „100“ (110 cm)
- extra charge for frame-plate doors up to the width of „82“ or plate doors „88“
- extra charge for higher doors (max 230)

Loft

Wooden doors with concrete structural elements. The industrial austerity of this collection perfectly suits building and interiors of a minimalist architectural style. An application of concrete on the external side of the door only as standard - concrete on both sides available for an extra charge.

What is a Lakobel Mirror?

It is glass painted in black which gives a mirror-like effect during the day. At night, with reduced external lighting, the glass becomes transparent as light shining from inside makes the interior of the house visible.

What's the difference between the types of glass available?

Antisol is solar control glass. The glass is delicately tinted with a shade of brown, which acts to reduce the transmittance of solar energy. Because of this, it prevents the room from overheating and protects items that are sensitive to ultraviolet radiation.

Reflex (stopsol) is a glass with enhanced sunlight control. This glass is visually attractive and provides privacy. This privacy is obtained by applying metal oxides to one side of the glass. Someone on the lighter side of the mirror glass can only see their reflection but remain visible to anyone on the darker side. Objects on the darker side only become visible only when that person gets close to the glass.

What's the difference between the types of glass available?

Venetian (Phoenician) mirror - is glass covered with metal oxide on both sides. It is usually used as a partition between rooms, one of which is dark. On the lighter side of the mirror, a person can see their reflection and is visible to people on the other side.

Milk glass - is a glass that is covered with a satin-matte varnish on one side for effect - the glass "transmits" light but remains opaque.

P4 - consists of two panes of clear glass with a security film between them. Thanks to this film, the glass doesn't shatter when broken. There will simply be a crack at the point of impact. P4 glass is only available in clear.

INOX

The wide variety of choice in the INOX collection allows us to fulfill the expectations of discerning customers who value the sublime quality of stainless steel used in this range.

Can glass with decorative trim be used in combination with RX, LW ML or P4 glass?

Yes, when ordering Homeefe Doors, you have the option to combine different types of glass. For example, for the doors illustrated above: INOX004 - transparent horizontal stripes can be combined with REFLEX glass and anti-burglary P4 added.

What is INOX and INOX 3D?

These are Homeefe doors with parts made of stainless steel, usually installed on doors situated on the exterior of a building. There is also the option to install them both internally and externally. The INOX 3D door has an additional convex stainless steel part and flat trim design.

Can purchasing a Homeefe door save me money?

Yes, if you are thinking about how to save money on heating your home, it's worth investing in a panel door with increased thickness - up to 88mm with a thermal coefficient of $U_d = 0.79W/m^2k$ for solid doors and $U_d = 0.95W/m^2 K$ for glazed doors.

Future

The unique, distinctive design of the Future collection allows for patterns and designs to be matched perfectly to a wide range of architectural features. Ranging from the simpler shapes of the Future F30 to the more enigmatic and innovative shapes of the Future line - model F13.

How does an automatic lock work?

After manually closing the door with the handle, the upper and lower bolts automatically retract by 1 cm (magnets attract the latches into the holes on the strike plate). Turning the key locks all points. It's possible to order a door without an upper lock, meaning locking would be via the basic lock only.

Did you know that...?

When choosing a door with a pull handle, you can choose from three different ways of opening:
1. With a key 2. With a moveable knob/ key 3. With a button/ key

ZEBRANO

The exotic addition of Zebrano wood inserts, highlights the character of this range giving a sophisticated design. The Zebrano wood grain is best achieved by selecting light colours from the Homeefe Doors palette. When choosing darker colours, the grain will become less visible.

What is the purpose of an adjustable lock strike on the door frame?

Installed as standard on our doors, they maintain an even, well-regulated pressure between the door and seal. You can adjust the lightness of door closure to suit your preferences.

For doors to look like new after construction has completed.

Do you want your door to look as good as the day you bought it ready for your housewarming? Here are a few secrets to doing exactly that. Firstly, the door should be installed after completing all wet construction works inside the building (plastering, screeding, finishing coats). In this way, you avoid any reaction between the excess moisture or construction chemicals with the wood used. You will also avoid accidental dents and scratches by the team working on the construction of the house of your dreams.

For doors to look like new after construction has completed:

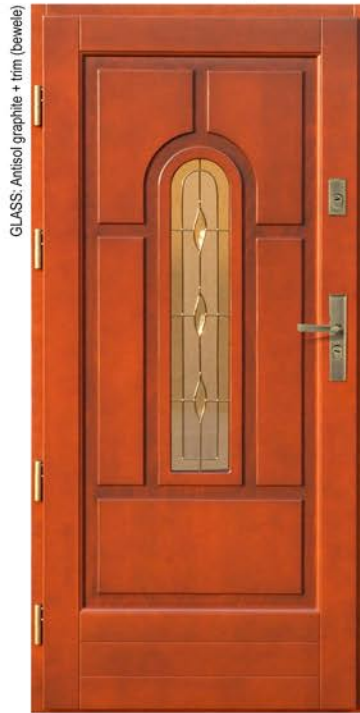

Secondly, ensure that the door has a canopy or is mounted into a recess, which will increase the durability of the door as well as protecting it against UV rays and any other inclement weather conditions (e.g. rain or snow). A door is similar to a car, the paintwork of a car looks fresher for longer when kept in a garage compared to one left outdoors. Thirdly, the purchase of suitable door care products will keep the door looking as good as new for many years.

i Which side extension? (2/2)

- Door imitation (panel in frame) - an extension consisting of a frame in which a panel in the style of the door is installed and sealed with a covering strip.
- Fixed sash - an extension consisting of a sash in the style of the door, permanently fitted into the frame.

Now available for an additional cost you can choose to keep the classic look of a frame-and-panel door but manufactured using panel door technology. By choosing this, you gain an increased thickness of door (72mm to 78 mm or 88mm) and a better thermal performance.

All you need to do is choose your frame-and-panel door selection and add FUTURE RP range.

* it is not possible to mount the upper insert which is recommended with a strip lock.

AXA CERES SOLO

Electric lock

Can't be combined with automatic strip lock

PRICE £110.00

The electric lock shown with standard lock (photo above) is hidden when used with a strip lock. Day/night function. For proper operation day/night function requires the installation of a door closer, see page 69.

AXA movable knob

Available with all AXA handles*

12 V Power supply

AXA SOLO 2 GAJA LOCK PLATE

*Not available with movable knob!

AXA SOLO 2 GAJA UPPER PLATE

Did you know?

This button is available with all types of handle. The button is fitted at handle height, allowing children and adults to open the door.

Doors with pull handle. How do they work? Which system should I choose?

1 First system:
Can only be opened from the outside with a key.
Only Axa Solo 2 Gaja fittings + Wilka class B or C inserts are available with this system. The advantage of this system is that it is the lowest priced option.

- The set includes:.**
- 1** pull handle (round or rectangular profile)
 - 2** Axa Solo 2 Gaja handle
 - 3** Wilka cylinder

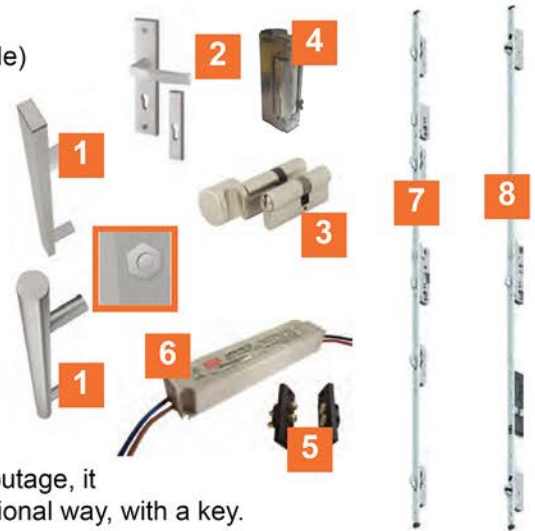

2 Second system:
Can be opened with a key or a moveable knob.
The moving doorknob fits all Axa handles. Opening is via the knob mounted on the pull handle side or with a key. The advantage of this system is its versatility.

- The set includes:.**
- 1** pull handle (round or rectangular profile)
 - 2** Axa handle
 - 3** Wilka cylinder
 - 4** moveable knob

3 Third system:
Can be opened with an electric lock or motorised bolt. This method is available with two options:
[7] with a 4-hook lock - after pressing the button in the lock, the motorised bolt is released; after turning the key, the door is locked.
[8] with a motor-controlled lock - after pressing the button in the door handle, the lock engine activates and the door is unlocked.
After closing the door, it latches automatically at 3 points; when the key is turned, the door is locked. With this configuration, no motorised bolt is needed.

- The set includes:.**
- 1** pull handle (round or rectangular profile)
 - 2** Axa Solo 2 Gaja lock
 - 3** Wilka cylinder
 - 4** electric lock
 - 5** 12v door installation
 - 6** 12v power supply
 - 7** 4-point hook lock
 - 8** motorised lock

In the event of power failure or outage, it is still possible to open the traditional way, with a key. The advantage to this system is its convenience.
